PSM1 SECR

PSM1 PROPOSAL

Parts of the proposal form

- Problem Background – the funnel approach
- Proposed Solution
- Literature Review
- Objective
- Scope
- Project Requirements

Problem background

- Start from generic statement(s) of the domain → to specific parts of the domain that you are focusing on
- Then state and explain each issue/problem that is happening and its impact(s)
  - PROBLEM 1 – IMPACT
  - PROBLEM 2 – IMPACT

→ This is to show why this project needs to be done

Proposed Solution

- State the proposed solution – Ex: A mobile app such as ALBUS will be able to solve all this issues/problems
- Explain how it solves the problem
- End with the importance/benefit of having this app/system/etc

Literature Review

- Just a simple review of some aspects of your project
- It could be:
  - A comparison of available existing systems/apps
  - A flowchart of current way things are done (make sure there is explanation – not just a flowchart all by its lonesome)
  - A look into the technology/algo you are using

→ Understandably it will be surface level. But this is to show your basic research and exploration you did for this topic

Objective

- Objective MUST be measurable ➔ happiness is NOT MEASURABLE
- Roughly you need 3 or 4 objectives that will cover
  1. **Review** – of the domain, case study, issue & of the technology/algorithm to be used in development/experiment
  2. **Design** – according to user requirements (SD) or research domain/area (R)
  3. **Develop** – develop based on design
  4. **Testing** – the functionality &/ usability of the system/app OR testing and running of experiments

Scope

- How big the size or focus of the project
- Example:
  1. Only covers Faculty of Computing (so not UTM as a whole or even other universities)
  2. The specific algo – usually in research

→ The modules you are going to develop is not part of scope

Project Requirements

Software	
Hardware	
Technology/Technique/ Method/Algorithm	
Network Elements	
Security Elements	
Project Type (Please circle one)	System Development, Research
Project Area:	(e.g.: Security – Cryptography)

Reminders

- The videos given (in e-learning) to you are part of the class – best to watch them to get idea of what to write in report and what is expected of you.
- Don't forget to do the video – and submit THE YOUTUBE LINK (NOT THE VIDEO FILE ITSELF)
- Comments by evaluators need to be discussed with SV – especially when you have to re-present them.
- Same evaluators (as best we can) for PSM1 evaluation too.

Reminders 2

- Please follow instructions – date, where and what to submit.
- No “I don’t know”, “I forgot”, “I didn’t read – my apologies”.
- There are consequences to your actions.

END
